

POS Integrated Network Video Solution with remote access for the multinational Zeeman textielSupers Group

The Zeeman Group operates almost 1100 Zeeman TextielSupers in the Netherlands, Germany, Belgium and France. Its formula is characteristic of high-level uniformity and low prices. Being cost conscious, the company has such important core activities as buying, logistics, finding new locations, automation and advertising carried out by its own staff.

For the video surveillance Zeeman wanted a single wireless camera that could be placed at trouble areas in the shops. Other cameras needed to function over existing twisted pair cables. To keep costs down, recordings needed to be done on a back office server supplied by Anker Systems that also handled other in-shop activities like stock position transfers.

1.100 locations throughout Europe monitored from the head office

Integration of back office and NVR functions

Anker Systems tailored the unique WebCCTV recording concept for Zeeman's needs. A single wireless camera is handled through a USB 2 port to which a video receiver is connected. The other cameras in the shops are IP cameras, using twisted pair cabling. The NVR and the back office functions (Lotus Notes based shop/headquarter communications) were integrated into a single server, handling both simultaneously. Thus reducing the costs considerably for Zeeman.

Software only NVR

The software approach to Network Video Recording was very important to Zeeman. As a discounter, the company could not afford to invest into a hardware installation that would soon become obsolete as a result of technological advances. The software based approach allows Zeeman to seamlessly migrate to the latest compression technologies.

The outstanding features of WebCCTV allow an easy integration with a point of sales system. All cash register actions can be stored synchronously with the video of the events taking place at the cash register.

Maximizing the benefits, central incident handling

Today WebCCTV technology enables Zeeman to handle the incidents taking place in all the 1.100 shops from its central head office in the Netherlands. The advantage is that a shop manager remains focused on sales while an experienced incident handler spends far less time on handling an incident.
