

Pharmacists have a 3rd eye ensuring their safety

Live Streaming from Drugstore to Control Room

Product:
WebCCTV NVR

Pharmacists that need to serve customers at night are more and more confronted with visits from uninvited guests. During late opening hours a drugstore is an easy target for crime especially by drug addicts.

Details:
**CCTV System Secures
Personnel & Customers**

To secure the safety of the pharmacist and customers at night a CCTV system is not always sufficient.

A "3rd eye" is required to keep an eye on unruly customers. If an uninvited or suspicious person enters the shop, the pharmacist can push a button to inform the control room. A live connection to the control room enables the guard to watch over the shoulder of the pharmacist like a 3rd eye.

- **Remote Monitoring**

In case the uninvited guest misbehaves or commits a crime the operator in the control room can inform the police while the crime is still in progress (the perpetrator does not know the police has been notified and help is on the way).

- **Permanent Recording**

WebCCTV NVR does permanent activity based recording in a high resolution of all connected cameras. All recordings are being written to hard disk with a digital signature that will prove the integrity of the movies when needed as evidence in court.

The pharmacist can view and backup movies locally or remotely but images can also be stored offsite in situations as we have just described. This ensures the pharmacist that the recording of the event does not get lost in any way.
