

Video Surveillance with Plate Recognition

Het Zoute Parking in Knokke Heist (Belgium)

Product:

WebCCTV NVR

Details:

Video Surveillance System with Plate Recognition

Het Zoute Parking Secures with Car Number-Plate Recognition

Het Zoute Parking is a big parking garage in the center of Knokke. Almost every week parking personnel copes with customers that do not follow proper procedures by trying to leave the parking without paying.

The CCTV system that was used before became unreliable; reviewing recordings was useless since they were frequently unrecognizable. Tapes were also difficult to handle and the system had a high cost of ownership because of yearly maintenance.

WebCCTV NVR stores recorded movies in a digital format. The system has no maintenance cost and the quality of the recordings is guaranteed.

Local/Remote Monitoring

WebCCTV NVR enables personnel to monitor uncompressed video signal of all cameras locally. They can easily playback, using an intuitive remote control. At the same time other users are able to view live and recorded movies remotely.

Plate Recognition

Cameras are installed close to the entrance/exit of the parking area. The Plate of all cars entering and leaving the parking is being recognized. This enables the personnel to inform Police with the necessary details in case of an incident.

Count Lippens, the Mayor of Knokke, declared on national television that because of the good results obtained with the WebCCTV system, more CCTV is going to be installed in Knokke.
